Overview

This QA checklist provides a structured way to review and validate work for accuracy, completeness, and reliability before final delivery. The goal is to promote consistent quality, reduce defects, and build confidence that the final result is fit for purpose.

1. Pixel Alignment & Spacing (vs. Figma)

- ☐ All elements match Figma design for position, size, and spacing.
- ☐ Margins, paddings, and gutters are consistent with design specs.
- ☐ No unexpected overlaps, gaps, or misalignments.
- ☐ Icons, images, and logos are sized and placed as per Figma.

2. Typography Accuracy

- ☐ Font families, weights, and sizes match design tokens.
- ☐ Line heights, letter spacing, and text alignment are correct.
- ☐ Heading hierarchy (H1–H6) is visually and semantically accurate.
- ☐ No text truncation, overflow, or wrapping issues.

3. Responsiveness (Multiple Breakpoints)

- ☐ Layout adapts smoothly at all specified breakpoints (mobile, tablet, desktop).
- ☐ No horizontal scrolling or content cutoff at any size.
- ☐ Images and media scale appropriately.
- ☐ Navigation and interactive elements remain accessible and usable.

4. Cross-Browser Behaviour

- ☐ Test in latest versions of Chrome, Firefox, and Safari (if available).
- ☐ No layout shifts, rendering bugs, or missing features in any browser.
- ☐ All interactive elements (buttons, forms, menus) work as expected.
- ☐ CSS and JS features are supported or have fallbacks.

5. SEO Validation

- ☐ Page titles and meta descriptions are present and unique.
- ☐ Headings (H1, H2, etc.) follow a logical, semantic order.
- ☐ All images have descriptive alt tags.
- ☐ Links use descriptive anchor text.
- ☐ No duplicate or missing metadata.

6. Core Web Vitals

- ☐ Largest Contentful Paint (LCP) loads within 2.5s.
- ☐ First Input Delay (FID) is less than 100ms.
- ☐ Cumulative Layout Shift (CLS) is less than 0.1.
- ☐ No blocking resources or excessive third-party scripts.
- ☐ Images are optimized and lazy-loaded where appropriate.
